SUMMARY

Data Analyst / Power BI Developer with 4+ years turning commercial data into executive decisions. At DwyerOmega, own the Power BI reporting suite used by 60+ leaders and lead the team's analytics automation and AI adoption, from Python reporting pipelines to Claude-based agents and applications. M.S. Technology Management, UIUC (4.0 GPA); CAPM.

SKILLS

BI & Modeling: Power BI (DAX, Power Query, semantic models, time intelligence), Tableau, Excel (Power Pivot)

Data & Engineering: SQL, Python (pandas, scikit-learn), SAP/ERP data, Snowflake, AWS, ETL, data reconciliation, Git

Analytics: KPI design, Budget/Forecast/PY variance, Price-Volume-Mix, backlog forecasting, retention & churn, segmentation

AI & Automation: Claude Code, Claude API, custom skills & plugins, MCP, agentic workflows, Lovable, prompt engineering

Certifications: CAPM (PMI), Google AI Essentials, FinOps for Snowflake, Microsoft Azure Fundamentals

EXPERIENCE

DwyerOmega

Austin, TX

Data Science Engineer, Commercial Excellence

Sep 2025 – Present

- Lead commercial analytics and Power BI reporting for a global industrial instrumentation manufacturer (15 brands, 11 regions), serving 60+ leaders including the President, Chief Product, Commercial and Marketing Officers and Regional VPs.
- Designed and own the executive reporting suite measuring performance against budget, forecast and prior year by account type, technology, vertical, brand and country; the single source of truth for regional performance reviews.
- Partner with the President, Chief Product Officer and sales leadership to translate business questions into analytics: Price-Volume-Mix bridges of YoY drivers, backlog waterfalls of shipments vs. budget, sales-incentive attainment.
- Built customer and channel analytics (retention, churn, new vs. existing accounts, SKU repeat rates, distributor stocking, city-level territory heatmaps) enabling e-commerce, marketing and sales managers to target growth and at-risk accounts.
- Established a trusted monthly orders dataset by reconciling ~1M rows (~\$100M revenue) across all brands and regions, replacing manual mapping with automated exact and fuzzy entity matching and rule-based account classification.
- Own DAX measure definitions across the reporting suite (variance, time intelligence, cohort logic) on SAP-fed semantic models, applying AI-assisted development to accelerate delivery and optimize measure logic.
- Automated the Monthly Business Review cycle end to end (Power BI extraction, Excel packs, SharePoint publishing, PowerPoint decks for 3 regions and 11 sub-regions), reducing preparation from 3 days to 4 hours for ~65 recipients.
- Set up Claude for the analytics team with Power BI connectivity and built custom skills and plugins that standardize recurring analysis (SKU performance, customer migration, segmentation), saving ~200 hours per month across 5 analysts.
- Developing 5+ AI applications on Lovable and the Claude API that automate repetitive commercial work, including a product assistant answering application-fit and SKU questions across a 700K-item catalog for sales owners.
- Designed agentic workflows with human-in-the-loop approval: AI-prioritized quote follow-ups with drafted outreach for manager sign-off, and rules-based credit-hold detection that flags accounts and routes holds for approval.

QSTN LLC

Champaign, IL

Data Analyst (Business Practicum)

May 2025 – Aug 2025

- Increased user sign-ups 37% and engagement 40% through Python behavioral analysis and A/B tests across 3 channels.
- Improved retention 52% with predictive segmentation models and Power BI dashboards that accelerated launch 3 weeks.

Persistent Systems

Pune, India

Senior Analyst (promoted from Software Engineer and Data Analyst)

May 2021 – May 2024

- Improved customer retention from 82% to 94% through SQL/Python churn analysis and Tableau at-risk dashboards.
- Reduced support-case backlog 93% with predictive maintenance models and real-time monitoring dashboards.
- Raised customer satisfaction 25% through feedback analytics and automated sentiment dashboards for leadership.
